Jennifer did a FANTASTIC job demonstrating search strategies and database capabilities for my Geol 421 class. The students in this class are required to complete a literature review as part of their course assignments, but most are unfamiliar with using databases like Scifinder, Web of Science, and GeoRef to efficiently locate and evaluate specific information. Jennifer set up a research page for the class with links to relevant library resources. She then put together and delivered an excellent lecture on how to use these resources effectively. Wow! Well done and much appreciated!
