This semester, one section of ARC351: Design III from the School of Architecture took on the design of an intervention in Morris Library. In groups of two or three, the students were asked to create a device which would:

- engage library patrons through touch, sound, and/or smell in addition to vision and
- respond directly to its particular context or place in the library
- not damage the library or its contents in any way

The intervention could be located anywhere in the public spaces of the library and could take any form necessary, functional or artistic, to accomplish the project goals. The project lasted three weeks; during this time the students developed initial concepts, presented the concepts to the library staff for project approval, and, finally, developed full-scale constructions of the work that were installed over the course of an evening.

The works on display are:

- Cognitive by Joshua Curvey and Kyle Eliakis
- Discovery by Robert Konzelmann, Amanda Nash, and Shaun Patel
- Harmony by Emily Hamilton, Joseph Mckinney, and Lauren Ovca
- Rotation by Courtney Cornell and Shiv Jariwala
- Cascading Color by Kendrick Hintz, Matthew Isely, and Ryan Pruitt
